

The charge for change

Powering distribution businesses for the energy transition

Video Transcript

The unfolding energy transition is changing everything, everywhere.

This disruption impacts us all, and utilities – in particular, distribution businesses – have a critical role to play in the move to net zero.

The opportunities are great – but there are real risks to manage.

Growth in distributed generation and prosumer solar are key triggers for the tipping points.

Disruption is right around the corner.

And most distribution utilities are not equipped to respond.

Meeting the challenges requires a fundamental shift for distribution operators – supporting truly active grid management as the energy transition evolves.

What's needed is a move toward a more intelligent distribution system.

One focused on increased visibility and control, driven by digital – and with data as the foundation.

Change is always a challenge.

But the road ahead offers sustainable benefits – for the business, consumers, and society at large.

And distribution utilities are in the driver's seat.

It's time to lead the charge for change.
