

TECHNOLOGY & OPERATIONS CENTRE, BALLARAT

VIDEO TRANSCRIPT

Clients really look to us to bring new talent, capability and skills. And increasingly, it's really important that in many cases that's onshore.

There's a lot of talk around sovereign delivery, around sovereign data, around sovereign AI. And what this really means is creating, in our case, the delivery hub, to service the specific needs of Australian businesses and Australian government.

We need to cast the net wide to make sure that we're picking up talent not just from out in metropolitan typical areas, but also expanding that into regional Australia and regional Victoria in this case.

Ballarat is a great combination of existing technology and other services skills, combined with the opportunity to work with the local universities there to build the skills of the future.

There's a lot of really interesting roles. A number of those will be based in technology, but equally services around, processing, whether it's payments or customer sales.

We're very excited for a number of reasons. It's actually creating intelligence jobs, jobs in information tech jobs in rural and remote locations and really lifting the productivity of all Australians in the country.
