

Reimagine what's possible with application modernization

Become a world-class software organization

Do you face these barriers to growth?

- Burdened by monolithic legacy applications
- Difficulty in scaling applications
- Costly maintenance and operations
- Stalled modernization due to unmet promise of cloud
- New GenAI or Agentic Features backlog

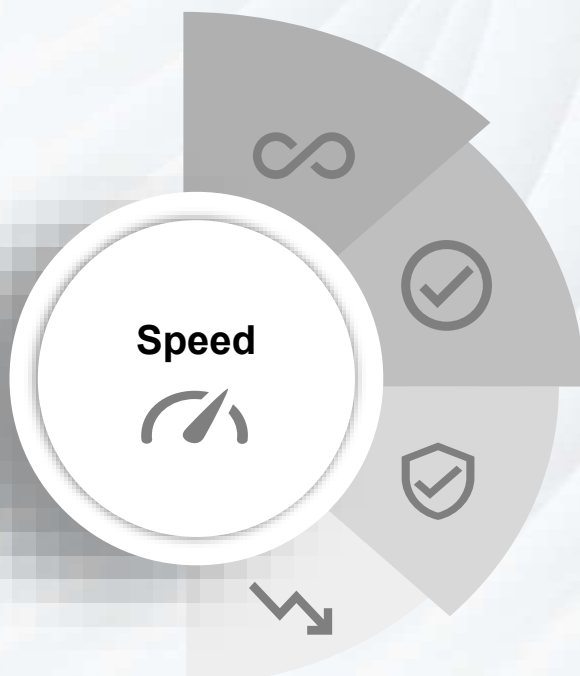

Get Faster and Smarter Results

With Google Cloud and Accenture's Next generation Application Development capabilities, assets, and experience, you can develop APIs and microservices, and deploy containers with:

- ✓ Reduced effort
- ✓ Accelerated development
- ✓ Faster time to market
- ✓ Significant business value

Modernization: A Strategic Imperative

Application transformation unlocks next-level cloud outcomes through a holistic “migrate to modernize” strategy.

Agility

- New explorations – succeed & fail faster
- Create & Respond to new revenue paths fast
- Elevate enterprise intelligence by human and Agent collaboration

Security & Compliance

- Automated patches & upgrades
- Quickly pivot & respond to new compliance requirements (i.e. GDPR/ Customer Data Protection Acts)

Reliability & Sustainability

- Quickly implement high availability and disaster recovery patterns
- Shrink carbon footprint

Reduce OPEX

- Move to variable spending via smart scheduling/ scaling
- Increase CPU efficiency by containerizing the workload

Application Modernization: Opens up new opportunities

Become a world-class software organization. In today's disruptive landscape, your software must be able to adapt with the business. Transforming applications, operating models and mindsets can unlock innovation and drive new business value.

Reinvent the business through intelligent applications

Unlock new experiences and revenue streams with Agentic AI infused cloud-native applications.

Get the software engineering operating model right

Develop a streamlined, self-organizing and cross-functional Human + Agentic team that can ideate and deliver new products and services faster.

Continuously reinvent and optimize the tech stack

Become a modern, cloud native enterprise by adopting a robust application transformation strategy while integrating modern, distributed architectures and engineering practices.

What you can do

Plan the Architecture of the future

Set the vision and roadmap for your modern application architecture that will be the foundation of current and future systems.

Modernize applications in the cloud

Migrate and modernize legacy applications and adopt modern engineering and Agentic practices to catalyze cloud-native transformation

Transform developer experiences

Develop efficiencies across developer tools, processes & Agentic technologies to facilitate faster, more secure delivery of IT solutions.

Optimize operations to fund transformation

Introduce all new efficiencies into your software operations and free up capital to maximize business value and self-fund transformation.

Drive innovation with software

Tap the power of generative AI for the software delivery lifecycle (SDLC) to facilitate rapid experimentation and prototyping.

What we offer?

- **AI infused Application Modernization**
 - Modernization that expedites client's legacy or monolithic application stack using Agentic AI, factory approach and robust accelerators
- **Modernize with API's**
 - 300+ unique assets, accelerators and point of views to enable our clients on their API journeys built on Google platform
- **Modern Software Delivery**
 - Highly scalable platform with DevOps tool chain and ready to use cartridges that helps to code, build, package and deploy applications for modernization
- **Edge Solutions for Multi-cloud**
 - GKE Enterprise focused industrialized approach to successfully implement multi cloud strategy at the edge or in cloud

Accenture + Google together - by the numbers

26X consecutive Google Partner Award Winner (2011-2025)

#1 Global Apigee SI Partner

1500+ Google engagements

Over 13 Years of Expertise in Apigee and Containerized Practices

20,000+ API and microservice practitioners, **1,500+** Apigee practitioners

68+ locations delivering Cloud and Innovation services

Featured Tools & Accelerators

Gemini Code Assist

Cloud Modernization

For Application Modernization

Powering innovation and differentiation with Google Cloud

3x Increase in developer productivity

50% Increase in daily deployments

40% Improvement in ability to respond to business needs

30% Reduction in carbon emissions per app

30% Reduction in hosting costs

20% Improvement in overall timeline from automation and tooling

1-2 Years to realize ROI
