00:00

Hi, great to be with you. Again, I'm here at Accenture's SAP Leadership Council, where we have over 140 of our clients, some of our account lead some of our SAP experts and our global leadership together. And it's been an exciting week, because we're super excited to be launching our compressed transformation approach for SAP technologies. And I'm joined right now by Scott owner, who's leading this for Accenture. Scott, do you want to bring it to life a little bit? Sure.

00:27

We've just had an amazing week down here in Miami, with our clients with SAP with our Accenture colleagues. And we're introducing compressed transformation for SAP technologies, which the key thing there, Emma is what that allows us to do is to pull forward value to our clients, our clients are just in such challenging times and challenging situations, when you think about what's happening around the world. And they're asking us, how can we deliver these SAP programs differently? So we're thinking about this in different ways, and introducing new delivery capabilities? One is

leading with data, and how do we take advantage of capabilities like enterprise navigator from Accenture, with the prime value chain methodology, and combine that with process mining from signavio, to really jumpstart and deliver and identify the value to reduce the amount of time that it takes to get these programs off the ground?

01:17

Fantastic. But it's not just about the delivery methods, it's about the people as well, right? It is,

01:22

yes, the people. So one of the areas that we've been focused on is our research into how do people enable and deliver more effectively and quicker in these particular situations, because we're focused on the movement to the cloud and driving standards and the behaviors of our client teams, as well as our Accenture teams that are required to lead the teams through those changes is very dynamic.

01:45

brilliant. And it's you know, I always say technology is the only gets you so far, it's all about how the people adopts and the way they adopt. And I know you've also got a lot of focus on tools and the automation around that. Can you bring that?

01:58

Absolutely. So as we think about our tools, assets, delivery accelerators, it's just super exciting. We've made tremendous investments related to industry and function. So how we deliver our standard business processes pre configured SAP solutions for 19 of our targeted industries, as well how we're able to take advantage of this new evolving technology to accelerate delivery through things like check GPT to develop functional designs, technical designs and actual code, as well as automation of testing or defect resolution, or even the automation of cutover.

02:33

Fantastic. Well, I'm really excited and you know, you heard that there's a lot in this program that we're working together with our colleagues from SAP, and it is going to be about that sum of small parts. There sadly, is no silver bullet, but I'm really confident that together, we can really help unlock that value faster. Thanks for joining me today. Thanks so much.
